

PREPARATION REQUIREMENTS FOR TREATMENT
OF
GERMAN COCKROACHES

1. Completely empty all kitchen & bathroom cabinets or cupboards where food and dishes or pots and pans are kept before technician arrives. Also remove any shelf paper.
2. Place all dishes and any other articles away from the kitchen area. DO NOT leave items on kitchen counter. We recommend you cover items with plastic trash bags or sheets.
3. Place any open food items such as butter, meat, or pastries in the refrigerator.
4. Remove all drawers from kitchen cabinets if possible. Otherwise they must be completely emptied as well.
5. Clean or wash all kitchen cabinets prior to extermination. DO NOT wash after treatment has been performed as this will remove residual product. You may wipe down shelves with a damp cloth before replacing glassware & dishes. But only shelves.
6. Remove all personal items from bathroom vanity below sinks & medicine cabinet above.
7. We recommend that pets such as dogs, cats and birds be placed in a bedroom with door closed. Fish Tanks should be covered with a damp towel during treatment.
8. In the event your unit requires bombing, All pets, people and children will be required to vacate their unit for a minimum of three (3) hours after treatment.

SEE REVERSE SIDE FOR IMPORTANT INFORMATION

IMPORTANT INFORMATION

1. No unit will receive treatment unless preparation has been completed. Technicians will not simply spray behind stoves & refrigerators only.
2. Preparation requirements are the same for every unit regardless the degree of infestation. Whether you've seen (1) or (20) roaches you must prepare the same.
3. Our goal is to eliminate all roach activity within your unit and this can only be accomplished with your cooperation.
4. All products to be used within your unit are E.P.A. approved and will always be applied in a safe manner and according to label directions only. We will only use products that are completely safe for pets, people and children.

WHAT TO EXPECT AFTER TREATMENT

1. All items removed from kitchen & bathrooms may be replaced 3 hours following treatment or until completely dried.
2. There may be a slight odor following treatment as well a visible residue in darker cabinets. This is normal and the product drying to its original color.
3. You will see an increased number of roaches for several days after treatment. This is also normal and will continue to decrease on a day to day basis thereafter.
4. The products used in your unit have a residual effect on cockroaches for 60-90 days following treatment. It is not unusual to still see live roaches weeks after treatment has been performed. This is normal. Please be patient. Even professional products take time to work.
5. Subsequent treatments may be required and should only be performed 30 days after last treatment. Performing treatments any sooner WILL NOT eliminate the infestation any faster.

HOW TO HELP CONTROL & PREVENT COCKROACHES

1. Sanitation is the key to control & prevention of cockroaches. Keep all food in closed containers or refrigerator. Clean counter tops & appliances regularly. Take out trash regularly. Keep kitchen free of clutter. Put dirty dishes & glassware in dishwasher, not in sink. Keep cabinets & appliances free of grease build-up.
